#### Replication Data for: Russian verbal borrowings in Udmurt

May 14, 2019

Arkhangelskiy, Timofey, 2019, "Replication Data for: Russian verbal borrowings in Udmurt", <https://doi.org/10.18710/5N34CG>, DataverseNO, V1

This is the dataset used in a study of Russian verbal loans in Udmurt. The files contain lists of Russian verbs found in the Udmurt social media corpus ([http://udmurt.web-corpora.net/index\\_en.html](http://udmurt.web-corpora.net/index_en.html)), manually annotated for several features such as aspect or frequencies in differen...

#### Replication Data for: Accusative of Negation in 'Borderland' Polish

Mar 8, 2019

Fellerer, Jan, 2019, "Replication Data for: Accusative of Negation in 'Borderland' Polish", <https://doi.org/10.18710/CYPRAY>, DataverseNO, V1

These are the data for a journal article on 'Accusative of Negation in 'Borderland' Polish'. The abstract of the article is below. The data consist of the annotated list of tokens of accusative vs. genitive of negation (=GenNeg.txt), excerpted manually from relevant sources docum...

#### Replication Data for: Les expressions spatiales en français médiéval: particules et formes préfixées en de-

Feb 6, 2019

Rainsford, Thomas, 2019, "Replication Data for: Les expressions spatiales en français médiéval: particules et formes préfixées en de-", <https://doi.org/10.18710/X5ZFXZ>, DataverseNO, V1

This dataset contains the raw data and the R scripts necessary to replicate all tables and figures in the cited publication. The raw data consists of manually-annotated plain-text concordances containing instances of five pairs of Old French spatial prepositions (ens/dedans, hors...

#### Replication Data for: Seeing from without, seeing from within: aspectual differences between Spanish and Russian

Nov 27, 2018

Janda, Laura A; Fábregas, Antonio, 2018, "Replication Data for: Seeing from without, seeing from within: aspectual differences between Spanish and Russian", <https://doi.org/10.18710/WR4Y0Q>, DataverseNO, V1, UNF:6:v5Lkz2Vq1VjqBSIUTbLvrA== [fileUNF]

This is the data that serves as the basis for an article comparing the grammatical category of aspect in Spanish and Russian. Here is the abstract of the article: Linguistic categories such as aspect are not identical across languages, and cross-linguistic differences can reveal...

- › Academia.edu and researchgate are NOT repositories
- › both make money from restricting access

## A note on scoping

---

- › Scooping means that someone “steals” your research while you are still finalising it
- › that fear is by and large unwarranted
- › you can count yourself happy if anybody IS actually interested in your data!
- › most research actually struggles a lot more with a lack of interest to outsiders rather than scooping
- › preprint servers allow you to register your data and establish primacy

- › conceptually separate your data, code, and prose text
- › make sure you can replicate all steps of your analysis
- › ideally, specify automated pipelines for your analysis
- › do not hardwire data and code
- › use a citation manager
- › use a versioning tool
  - › local or university or cloud
- › use a preprint server
- › backup
- › backup
- › backup

- › “Copyright” in the Anglo-Saxon countries
- › “Urheberrecht” in continental Europe
- › These are different!
- › Once you create something, you can decide who can use it and how
- › Choose wisely and be explicit!

- › Usage rights can be differentiated as follows
  - › geographical restriction (only for Europe)
  - › type restrictions (only for print)
  - › exclusive (no-one else has the right) vs. non-exclusive (other people may also get the rights)
  - › copyright transfer agreement
  - › total buy-out

---

## TRANSFER OF COPY

12. The Editor hereby assigns to the Publisher the full copyright and other moral rights in the Work which the Publisher hereby accepts. Consequently, the Publisher shall have the right to grant a licence to third parties in the world to publish and sell the Work in all languages and territories without limitation, any abridgement and substantial part thereof, including, without limitation, mechanical, digital, electronic, audio, storage and retrieval systems, including internet and electronic publication now known or hereinafter invented, and to include the name of the Work and any additions and alterations thereto.

## Contracts

---

- › Publisher contracts restrict everybody, including yourself
- › once you sign away your copyright, you have no longer the right to use your own material
- › to reuse tables or graphics in subsequent works of yours, you must first ask the new rights holder for permission
- › chasing rights is incredibly annoying
- › publishers will put your content behind a paywall, meaning that it can actually be more difficult to access once it is officially published than before
- › publisher vary as to whether and when they allow books to be hosted in repositories

# The Genesis of Sri Lanka Malay

A Case of Extreme Language Contact

Series:

Brill's Studies in South and Southwest Asian Languages, Volume: 3

Editor: Sebastian Nordhoff

In *The Genesis of Sri Lanka Malay: A Case of Extreme Language Contact*, the synchrony and diachrony of Sri Lanka Malay are investigated from a variety of angles: Experts on South Asia, South East Asia, Creole Studies, Areal Linguistics, Typology

- › Universities want to hire good researchers
- › The amount of research produced by all candidates combined is too much for the committee to read
- › The committee use some proxy to judge quality: the brand of the publisher of the journal
- › good publishers, regular publishers, bad publishers, ...
- › NB: quality selection is done by the editors, not by the publishers
- › the process is more or less the same for all publishers

- › One a publisher is perceived as prestigious, a self-reinforcing loop starts:
  - › researchers present better manuscripts to the publisher
  - › the publisher has more material to choose from
  - › the average quality of the publisher gets better
  - › prestige goes up
  - › start over
- › Crucially, there is not necessarily more work being done by prestigious publishers
- › But since the brand is owned by a company, they increase the prices beyond proportion

24 Oppenrieder (1991, S. 261) und Hoffmann (1997, S. 440) gehen davon aus, dass die Sätze in (20) Sätzen mit Korrelaten entsprechen:

- (i) a. Doch es ist egal, was noch passiert.
- b. Es ist interessant, (zu erwähnen,) dass ...

Erweitert man Sätze wie (i.b) mit Adverbialien, stellt man fest, dass der kopulalose Satz genauso markiert ist, wie der mit dem Adjektiv im Vorfeld:

- (ii) a. Es ist selbstverständlich/im Grunde genommen interessant, dass ...
- b. ? Selbstverständlich/im Grunde genommen interessant ist, dass ...
- c. ? Selbstverständlich/im Grunde genommen interessant, dass ...

Wären Abfolgen wie Interessant, dass ... Ellipsen von es ist, würde man erwarten, dass (ii.c) so unmarkiert wie (ii.a) und nicht so markiert wie (ii.b) ist.

Eine alternative Erklärung für den Unterschied ist, dass es sich bei Adjektiv+dass-Satz um ein konventionalisiertes Muster handelt, das einfach keine Modifikation zulässt. Das würde auch erklären, warum auch andere Abfolgen von Adverbiale und Adjektiv wie z. B. (iii) nicht möglich sind.

- (iii)\* Interessant selbstverständlich, dass ...

Dazu später mehr. Zur Diskussion der Adj+dass-Satz-Muster siehe Günthner, 2009, S. 151.

D. r(%records,IF)

## It's the employability, stupid

---

- › Being employed as a professor between 40 and 65 years gives you 3 000 000 EUR income.
- › It is economically rational for each individual researcher to spend 5 000+ EUR for an article in Nature if this improves your chances to become a professor
- › It is economically rational for Nature to charge as much as they can since they are a public company
- › But this sucks money out of research, which could better be used to improve teaching, fund postdocs or develop vaccines.
- › Two solutions:
  - › decouple research evaluation from the place of publication
  - › move the brands from the for-profit-sphere to the non-profit-sphere

- › Choose a scholar-led community-owned publisher
- › do not exacerbate libraries' burden
- › lobby against stupid criteria of research assessment like the Journal Impact Factor

# Political aspects

| Political aspects

## Political initiatives

---

- › DEAL: Germany negotiates national OA licensing programmes with big publishers
- › Plan S: Research funders will require 100% Open Access from projects they fund
  - › There are indications that both actions probably lead to an increase in authory-pays publishing fees
- › Sci-Hub and LibGen allow you to access paywalled content and are probably more successful an instrument than all political initiatives

## Political miscellanea

---

- › Swiss National Fund pays generous processing charges
- › Austrian FWF is more on the repository side
- › The San Francisco Declaration on Research Assessment (DORA) calls for a move away from journals/publishers as proxies for research evaluation.

- › Gold: Content is free for readers
- › Platinum: as above, and free for authors
- › Palladium: As above, and all financial statements are disclosed
- › Iron: pay-to-read
- › Lead: editorial and financial aspects are not hermetically decoupled

- › separate data, code, and text
- › use a versioning system
- › publish all your data in appropriate repositories
- › use preprint servers
- › use the CC-0 license for data and the CC-BY license for text
- › do not sign away your copyright
- › care for your discipline, go for scholar-led community-owned publishers
